

VMware infrastructure healthcheck

A very real advantage when it comes to improving virtualisation

Do you have concerns about your VMware infrastructure? Or do you simply want to see if it could perform better? Either way, we're in a great position to be able to help you, thanks to the certification, training and experience of our VMware specialists.

We've over 20 years' experience helping European organisations of all shapes and sizes get the best out of their hardware and software. And we've been a VMware Premium Partner for many years, meaning few other companies are better placed to look at 1] how any VMware issues you may have can be fixed and 2] whether there are any opportunities for improvement. Our healthchecks are simple to arrange and you could have the answers you're looking for within just three days.

What's involved?

A one-day onsite visit will start with a discussion of your environment and any concerns you have, followed by an assessment of your VMware infrastructure (including up to 5 ESX hosts).

We'll use command line tools, scripts and VMware Health Analyser to collect inventory, usage and configuration data.

We'll then spend two days creating a report containing a summary of the assessments and results, our observations and our recommendations, along with reasons for those recommendations.

What's included?

In addition to a hardware inventory for ESXi hosts and vCentre, your VMware healthcheck will also provide you with:

- A workshop where your team can learn VMware infrastructure best practices
- Identified opportunities for further virtualisation
- Further ideas on how to optimise configuration and optimise performance

Requirements

- Available staff who can provide us with access to your VMware environment
- VMware vSphere Environment with vCentre 4.0 or later
- Sufficient free capacity to run the HealthAnalyzer tool – Up to 500VMs and 100 Datastores will require 2x vCPU and 1GB Memory

Why choose Proact?

Over the past 20 years, we've grown to become Europe's leading independent data centre and cloud services provider.

We've been a VMware Premier Partner (the highest level of certification) for many years and we offer a vast range of VMware-related services, from presales and sales, to implementation and support.

No matter what size or how complex your VMware environment, our certified, trained and experienced consultants will deliver a real business benefit – better VMware performance.
