

# VMware Horizon View healthcheck – Fast track

We conduct an onsite assessment of your Horizon View infrastructure using the VMware Health Analyser virtual appliance to collect inventory, configuration and usage data.

An EUC professional will work with your team to understand your environment and any current concerns. They will then carry out a Health Assessment using command line tools, scripts and the VMware Health Analyser tool. We'll document the results, providing you with:

- A summary of the findings and a prioritised list of issues
- An inventory of the discovered estate
- Any recommendations to improve quality of service

In addition to identifying opportunities to optimise configuration and improve performance, we'll also:

- Compare the service against best practice to ensure it's fit for purpose
- Hold an interactive workshop on best practice, new features and EUC developments

We offer this service at fixed prices based on the size of your infrastructure and the time required to analyse it and report on it:

Small Deployment ( <b>&lt; 5 hosts</b> )	<ul style="list-style-type: none"> <li>• 1 day on-site</li> <li>• 2 days write-up</li> </ul>
Medium Deployment ( <b>5-10 hosts</b> )	<ul style="list-style-type: none"> <li>• 1 day on-site</li> <li>• 3 days write-up</li> </ul>
Large deployment ( <b>10-20 hosts</b> )	<ul style="list-style-type: none"> <li>• 2 days on-site</li> <li>• 4 days write-up</li> </ul>
Enterprise Deployment ( <b>&gt;20 hosts</b> )	<ul style="list-style-type: none"> <li>• 3 days on-site</li> <li>• 5 days write-up</li> </ul>

## Why choose Proact?

---

We've been a VMware Premier Partner (the highest level of certification) for many years and we offer a vast range of VMware-related services, from presales and sales, to implementation and support.

With their ever-expanding product portfolio, VMware has split its accreditations into several different categories. We specialise – and have received accreditation – in the following VMware product areas: Server Virtualisation, Business Continuity, Cloud Provider Program, Management Operations, Desktop as a Service, Desktop Virtualisation, Software Defined Storage and Network Virtualisation.

We are Europe's leading independent data centre and cloud services provider – and have helped over 3500 organisations throughout Europe since we started out over 20 years ago.
